

HELEN MCGETTIGAN - FACILITATOR

Helen has over 17 years of experience across consulting and water utilities in Australia and New Zealand. As a Senior Engineer at Wallbridge Gilbert Aztec (WGA), Helen has a special interest in developing climate resilience through integrated water management projects that provide innovative technical solutions such as Managed Aquifer Recharge and recognise the social and economic value of water. Helen believes that engineers have the power to shape the environments in which we live, and actively seeks opportunities for change and adaptation to ensure her projects contribute to a sustainable legacy.

BEC KARLSSON

Bec Karlsson is a Senior Business Development Manager at SA Water.

In her role she identifies, develops and project manages business opportunities to achieve optimum returns and effective use of SA Water's core capabilities. She leads

collaborative cross-functional project teams to ensure planned business and customer outcomes are achieved, through the implementation of innovative and creative solutions within regulated and non-regulated markets. Bec works to develop robust business cases and negotiate commercial terms for projects, mitigate risk exposure and briefs the organisation's Senior Leadership Team in support of business proposals.

Bec is currently involved in the Primary Industries and Regions South Australia-led New Water Infrastructure for the Barossa project, aimed at delivering new water infrastructure to the Barossa and Eden Valleys to support sustainable agricultural production, through the supply of recycled water from SA Water's Bolivar Wastewater Treatment Plant. The project will receive \$3.5 million through the Commonwealth Government's National Water Infrastructure Development Fund to progress a detailed business case for the project.
