

15 LIFE ON LAND

Protect, restore and promote sustainable management of ecosystems and forests, reverse land degradation and halt biodiversity loss.

A flourishing life on land is the foundation for our life on this planet. We are all part of the planet's ecosystem and we have caused severe damage to it through deforestation, loss of natural habitats and land degradation. Promoting the sustainable use of our ecosystems and preserving biodiversity is the key to our own survival. This includes conserving and restoring freshwater ecosystems, and preventing invasive alien species in water ecosystems that kill native species.
